

READY-SET-FLOW!

Simplify pool and spa installations with the ReadySet® 24 volt electronic valve actuator. A time-saving upgrade, ReadySet® helps pool builders and contractors quickly establish valve position set points without unscrewing the actuator casing or making manual adjustments.

FEATURES & BENEFITS:

- **No-Hassle Design** – Easily establish valve position set points using the ReadySet® toggle-switch interface – no manual adjustments necessary.
- **Immediate Time Savings** – Save 20 minutes or more when setting new stopping points.
- **Flexible Settings** – Incremental valve positions – rather than 45° / 90° / 180° presets - allow the ReadySet® to regulate water flow for any application. Ideal for spillovers, laminar jets and bubblers.
- **Install Verification** – Audio-visual cues help verify the ReadySet® actuator has been properly set up, minimizing the need for follow up service calls.
- **Anytime Access** – Maintain valve operation in the event of a loss of power with the unit's visual indicator and handle.
- **Effortless Compatibility** – Designed to accommodate both 2-way and 3-way diverter valves, ReadySet® is compatible with all pool and spa flow controls. Includes a 30 foot cord: the longest on the market.

APPLICATIONS:

ReadySet® brings simplicity and reliability to a wide range of water flow applications:

- In-Ground Pool and Spa Combinations
- Water Features
- Bubblers
- Laminar Jets
- Solar Heating & Cooling
- Rainwater Collection Systems
- Decorative Fountains

SPECIFICATIONS

- Input Voltage:** 24 VAC
- Amperage:** 0.75 Amps
- Cycles:** 60 Hz
